the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office of National Statistics 1999). The number of people aged 65 and over is projected to increase to 10.5 million by 2026, and the number of people aged 75 and over to 6.5 million (Office of National Statistics 1999). The increase in the number of people aged 65 and over is expected to be due to a combination of factors, including an increase in life expectancy, a decrease in the birth rate, and a decrease in the death rate (Office of National Statistics 1999).

The increase in the number of people aged 65 and over is expected to have a significant impact on the UK's health and social care system. The number of people aged 65 and over who are in need of health and social care services is expected to increase significantly in the coming years (Office of National Statistics 1999). This is due to a number of factors, including an increase in the number of people aged 65 and over who are in need of health and social care services, and a decrease in the number of people aged 65 and over who are able to live independently.

The increase in the number of people aged 65 and over is also expected to have a significant impact on the UK's economy. The number of people aged 65 and over who are in need of health and social care services is expected to increase significantly in the coming years (Office of National Statistics 1999). This is due to a number of factors, including an increase in the number of people aged 65 and over who are in need of health and social care services, and a decrease in the number of people aged 65 and over who are able to live independently.

The increase in the number of people aged 65 and over is also expected to have a significant impact on the UK's social care system.
